This book was poorly edited with several typos and inconsistent ink, making some sections hard to read. The practice test was a repeat of the questions from the chapter reviews so it did not provide any benefit. The questions were not very challenging and did not represent the level of difficulty on the CEN. I highly recommend anything else for a study guide.

Great foundation and the questions on the exam we're pretty close to the same format

What I loved - This book is laid out by system specific chapters. I initially used the CEN test blueprint to guide by studying, but I quickly realized this book actually followed the CEN Test blueprint to a T! The Assessment and Interventions sub-sections for each disease/condition contains simple bullet points of information (instead of long paragraphs). Test questions at the end of each chapter were good review of content. Having the ability to fold the pages in half, go through the questions and then open the page back up to see the rationale next to each question made studying very efficient! This completely eliminated having to search the index, flip back to the chapter, and re-read a section in order to find a rationale. Also super helpful, the question rationales explaining why the other three multiple choice options are wrong. The 150 question CEN prep quiz at the end of the book helped "pull everything together." What I thought was missing - labs are listed under the Assessment sub-sections, but not many of them explain what should be abnormal? Ex. Pancreatitis labs - serum chemistries, but no mention of what is typically abnormal or important to watch for (hypocalcemia.)

a good guide thanks so much
