We are homeschooling for a year or two, but wanted my son to keep up with the kids in his grade for when he returns to school, so we bought the same textbooks our school district uses, which is this series, specifically pre algebra and algebra I. We bought both the hardcover text book that students in the school use, and the soft cover workbook supplements. The hardcover books are just as dry and mind numbing as the math textbooks we all grew up on, which is too bad...math is FUN, and it is my son's favorite subject. (He's a math genius actually.) There are so many great math books oriented for homeschoolers that are actually good, why do schools choose these classic lead bricks of books that can just take the joy out of it? The supplemental soft cover books are useless. I thought they'd correspond to the main text, providing additional exercises, but they don't seem to

correspond at all. A math tutor who used to be a high school math teacher for years works with my son, and she had hoped to make use of the supplemental workbook but instead she just makes up her own exercises for him.

Helping me tutor math.

Another great teaching aid

Very good and easy to follow.

great help in math work

My son was not weak in Math but he didn't feel quite prepared for Pre-Algebra. Our private tutor recommended this book and I'm so glad she did!

Everything is good!

This book arrived in the condition stated and in a timely manner. This was a great transaction.
