Exploring Creation With Marine Biology, Student Text Only

Synopsis

This course concentrates on marine wildlife and marine habitats. It provides a survey of members of each biological kingdom that live in marine environments. The student will learn about the microscopic organisms that make life in the ocean possible, including details about their interesting habits and life cycles. Biology required.

Book Information

Hardcover: 462 pages

Publisher: Apologia Educational Ministries, Inc.; Student/Stdy Gde edition (September 1, 2005)

Language: English

ISBN-10: 1932012583

ISBN-13: 978-1932012583

Package Dimensions: 11 x 8.6 x 1.4 inches

Shipping Weight: 4 pounds

Average Customer Review: 4.4 out of 5 stars 17 customer reviews

Best Sellers Rank: #74,609 in Books (See Top 100 in Books) #2 in Books > Science & Math > Nature & Ecology > Ecosystems > Coral Reefs #98 in Books > Science & Math > Nature & Ecology > Oceans & Seas

Customer Reviews

Sherri Seligson and her husband, David, have homeschooled their four children for 21 years, recently graduating their youngest child. A degreed marine biologist, Sherri worked at Walt Disney World's Living Seas, publishing shark behavior research. She has authored Apologia's Exploring Creation with Marine Biology and interning for High school Credit, instructional DVD courses for Apologia's Exploring Creation with Biology and The Human Body, as well as companion curricula for feature films including Dolphin Tale I and II and War Horse. Sherri has written for several science publications and homeschool magazines and is a national conference and retreat speaker where she encourages moms on their homeschool journey and teaches families and students the importance of studying God's creation.

This is the second Apologia science book. They are great. The material is intense. This curriculum is for advanced students. Average students may struggle. Below average students will be extremely challenged.

good

Product arrived as promised.

Thanks!

Love the pictures

This is the book used in a home school cooperative that my daughter participates in. If you want materials that exclude evolutionary process as an origin, this book will work for you. However, it does not appear to espouse the gap understanding of the Biblical creation narrative either (I have not read it cover to cover, but skimmed through it) It is a good introductory study of the subject matter that is likely to spawn additional outside research by the curious student.

This marine biology textbook is easy to read and understand. It builds on the previous science courses and build on the concepts. These concepts are explained so you can understand it even if you haven't been exposed to them previously!!

This book was so enjoyable for my 15yr old son, he was able to gather facts and still enjoy the reading material without it becoming boring half way through the book
